

# Numatic Nu-AR

## HOW TO USE INSTRUCTIONS

1. Click on the link.

2. When the QR code appears, scan with a smart device. Tablets are the preferred device for full viewing capability.

3. When this window appears, point your device towards a bright open area and press the AR experience button to initialise the model.

4. Depending on your internet speed, a loading wheel will appear, keep your device pointed towards the space.

5. When the AR model loads, it will try to find a space where it can appear 100%.

6. If the model is 100% size, you will see a white box around it when the model initially lands. If the model is floating in mid-air, move the device up and down until the model finds its space.

7. The model is interactive, so you can move your device up close to it and view it as if it were real.

8. There is a touchpoint on the front of the model which lets you physically turn and move the model around.
